August 2018 – Featured Manufacturer – [Powers](#)

POWERS™

A WATTS Brand

Water Tempering Innovation Since 1891

M&M Distributes the Finest Names in the Industry!

About Powers: Happy 34th Anniversary, M&M! Thirty-four years ago today, our founders began M&M with an idea, a garage, and POWERS behind them, the very first line we carried!

Powers™ produces some of the finest, quality equipment from commercial shower applications to process grade valves and actuators. Over the past one hundred years, Powers has continued to pursue a tradition of product innovation. Today the company holds patents on technologies that serve as the backbone for many products serving the commercial and industrial temperature control markets.

Check out the [Flowrite II® Heavy Duty Bronze Globe Control Valve](#) with a rugged design that is perfect for your steam/water modulation, mixing or bypass applications. Invest in our most popular model, the [Powers No. 11 Regulator](#) that includes *interchangeable* sensing and control "components" for minimum downtime, greater flexibility, and extra economy. Catch the Next Wave in Master Tempering Valve Technology with [HydroGuard®XP Master Mixers](#).

With Powers #11 Self-Operating Temperature Regulators, you no longer need external power to control your process. Just one temperature set-point adjustment to make and the rugged, self-operating #11 Regulator controls the flow of heating or cooling medium and maintains a uniform temperature. So whether you're using processing equipment, heat exchangers, or machinery, Powers #11 Self-Operating Temperature Regulators are the easy solution to your control problems.

Flowrite II Heavy Duty Bronze Globe Control Valves: Utility bronze control valves for steam/water modulation, mixing or by-pass applications. Safety features protect your process and your personnel. Balanced and unbalanced designs. Multiple packing choices - spring loaded. Stainless steel hardware and actuator mounting accessories. Available with pneumatic diaphragm. Union and screwed ends.

Master tempering shower valves are available in five sizes that temper water as high as 208 gpm and as low as 3 gpm. Advanced paraffin actuation technology delivers dynamic response and excellent low flow temperature control.
