About Armstrong: Armstrong has over a century of experience, knowledge, and insight into thermal utilities management and system solutions for steam, air, and hot water. Armstrong innovations and improvements in product design and function lead to savings in time and energy, and a smaller carbon footprint. Whatever your industry, when you turn to Armstrong, you can consider it done.

Are you running on 20th-century steam in the 21st-century?

Armstrong modern technological products will put your company back on top!

M&M Control offers a full line of Armstrong products. For other products such as pumps, strainers, vents, air drain traps, and industrial water temperature controls, please refer to our **Armstrong** pages or call us today!

Armstrong Steam, Air, & Hot Water System Solutions

Steam Traps & Tracing

Regulators & Control Valves

Liquid Drainers

Smart, Practical System Solutions

Armstrong has the solution you need for steam, air, and hot water applications. Some products featured here include:

- **Steam Traps & Steam Tracing:** Armstrong's steam traps offer a variety of materials and connector styles. The most reliable steam trap known — the **inverted bucket** — provides efficient condensate drainage of virtually all types of steam-using equipment.
- **Pressure & Temperature Controls:** Armstrong helps you manage your steam, air and liquid systems safely and efficiently with pressure and temperature controls, as well as condensate coolers and drain separators. The **GP-2000** is a high-performance, externally piloted reducing valve for large-capacity requirements.
- **Liquid Drainers:** Liquid drainers installed at appropriate points will remove liquid continuously and automatically without wasting air or gas. Armstrong's stainless steel, **free-floating guided lever drain traps** use the same bodies, caps, lever mechanisms, valves and seats as its **inverted bucket steam traps**.
